

member of the initiative for the recycling of plastic windows

THE COMPANY

profine GmbH

HAS BEEN SINCE

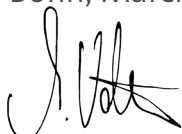

2002

as a shareholder of Rewindo GmbH, a promoter
and designer of plastic window recycling in Germany.

Rewindo is the association of leading German plastic profile manufacturers to form a joint recycling initiative. Its goal is to promote the re-use of recyclable materials from old plastic windows, shutters and doors through a recycling system that offers modern technology and service.

In this way, the cycle of recyclable materials is closed, valuable raw materials are preserved and the recyclate is used to manufacture new products. This conserves resources, saves energy and reduces the burden on the environment.

Bonn, March 2020
